

Central Nutrition Center – HVAC and Refrigeration Upgrades

Central Nutrition Center

The existing roof top units will be replaced with new upgraded variable air volume units with increased thermal zones and upgraded controls. Makeup air units and exhaust fans will be installed to provide appropriate makeup air and exhaust to the dish room and kitchen areas with room pressure controls. The existing steam to domestic water heaters will be replaced with high efficiency gas water heaters to serve the building's domestic water needs. The existing failing refrigerant rack system will be replaced and upgraded throughout the building. Associated architectural and structural components will be revised to meet the HVAC upgrade needs.
